                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
```

The invention relates to an isolated mite allergenic protein of
Dermatophagoides, designated Der HWW-map protein, and its related nucleic
acid. The Der HWW-map protein is useful for eliciting an immune response
against Der HWW-map protein. The protein or a reagent comprising a nonproteinaceous epitope is useful for identifying an animal (e.g., dog,
cat) susceptible to or having an allergic response to a mite. A
cherapeutic composition is useful for desensitising a host animal to an
allergic response to a mite. The DNA and protein can be used in the
detection of anti-Der HWW-map antibodies in animal fluids, and inhibition
of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a
disease. Antibodies that bind to Der HWW-map are useful for inhibiting
chinding of proteins to IgE, to prevent immunocomplex formation, thus
reducing hypersensitivity responses to mite allergens, and as vaccines
considered the constant of the constant o

n Dermatophagoides, designated for treating mite allergy.

New mite allergenic protein isolated from Der HMW-map protein, useful as a vaccine f Claim 12; Page 120-122; 161pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein (map) Poerp98 490, the mature form of poerp99-509. Poerp98 490
has a molecular weight of 98 kD, comprising 490 amino acids, and has a
high degree of homology with the D. farinae mature 98 kD allergen, mapp
(AAY52525). Nucleic acid molecules encoding Poerp98 490 were isolated
from a D. pteronyssius cDNA library by hybridisation with a probe
encoding the D. farinae high molecular weight map (HMW-map) composition.
Mite allergenic proteins and peptides, and nucleic acids encoding them,
may be used in therapeutic compositions to modify an animal's
hypersensitivity reaction to mite allergens. Animals that may be treated
include mammals and bixds, especially felines, canines, equines, humans,
other pets, and work or domestic animals. The proteins or fragments may
peptides can also be used to caima entibodies, which have a variety of
potential uses. For example, they can be used as vaccines to passively
in munise animals against dust mite hypersensitivity, as positive controls
in test kits and as tools to recover desired dust mite allergens from a
mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)

D. pteronyssius 98 kD mite allergen protein (map) PDerp98-509

```
Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map protein acinity associated with a finannoglobulin (Ig)E or Der HWW-map protein activity associated with a fiscase. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens, and as vaccines against mite allergen hypersensitivity. Sequences ANU96314-AAU96342
  mite allergenic protein isolated from Dermatophagoides, designated HMW-map protein, useful as a vaccine for treating mite allergy.
                                                                                                                                              an isolated mite allergenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represent Der HMW-map polypeptides of the invention
                                                                                      Claim 12; Page 144-146; 161pp; English.

This sequence represents Dermatophagoides pteronyssius mite allergen protein (map) PDerp98-509. PDerp98-509 has a molecular weight of 98 kD, comprising 509 anino acids, and has a high degree of homology with the D farinae 98 kD allergen, mapB (AAX5253). Nucleic acid molecules encoding Pberp98-509 were isolated from a D. pteronyssius cDNA library by hypridisation with a probe encoding the D. farinae high molecular weight map (HWW-map) composition. Mite allergenic proteins and peptides, and nucleic acids encoding them, may be used in therapeutic compositions to moleic acids encoding them, may be used in therapeutic compositions that may be treated include mammals and birds, especially felines, canines, equines, humans, other pets, and work or domestic animals. The proteins are fragments may also be used to chagnose allergies via a skin test. The proteins and peptides can also be used to raise antibodies, which have a variety of potential uses. For example, they can be used as vacines to passively immunise animals against dust mite the recover desired dust mite allergens from a mixture of proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              182
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DPYQDDNHNSWEKRGYERFINNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQQFIQ

The invention relates to an isolated mite allergenic protein of Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceous epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the allergic response to a mite. The DNA and protein can be used in the detection of anti-Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting
                                                                                                                         362

Dermatophagoides, designated Der HWW-map protein, and its related nucleic acid. The Der HWW-map protein is useful for eliciting an immune response of against Der HWW-map protein. The protein or a reagent comprising a non-proteinaceus epitope is useful for identifying an animal (e.g., dog, cat) susceptible to or having an allergic response to a mite. A therapeutic composition is useful for desensitising a host animal to an allergic response to a mite. The DNA and protein can be used in the cleterion of anti-Der HWW-map antibodies in animal fluids, and inhibition of immunoglobulin (Ig)E or Der HWW-map protein activity associated with a disease. Antibodies that bind to Der HWW-map are useful for inhibiting binding of proteins to IgE, to prevent immunocomplex formation, thus reducing hypersensitivity responses to mite allergens formation, thus against mite allergen hypersensitivity. The present sequence is that of the mosquito Anopheles gambiae chitinase. This protein is used in claimed fusion proteins of the invention. Such fusion proteins comprise a translocating moiety and a toxic moiety, where the translocating moiety and a toxic moiety, where acting as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an insect-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable insect peptides and proteins include allatostatins, chitinase, diuretic hormone and their metabolites and analogues. Polymolecides encoding the fusion protein, vectors, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    65 YQDDNHNSWEKRGYERFNNLRLKNPELTTMISLGGWYEGSEKYSDMAANPTYRQQFIQSV 124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               542
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       enzyme;
insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABR32072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidaring cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7737-ABR27272). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    isolated nucleic acid detection reagent for detecting 1000 or more
se from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SKNPMRIVCYVGTWSVYHK-VDPYTIEDIDPFKCTHLMYGFAKIDSYKYTIQVFDPYQDD

                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of prawn (Penaeus japonicus) chitinase. This protein can be used in claimed fusion proteins of the invention comprising a translocating moiety and a toxic moiety, where the translocating moiety is a plant protein (e.g. a lectin) capable of as a carrier to translocate the toxic moiety across the gut wall of a plant pathogen, and the toxic moiety is an arthropod-derived peptide or protein capable of causing deleterious effects on growth, development, reproduction or mortality in pest insects. Suitable arthropod peptides and proteins include allatostatins, chitinase, diuretic hormone and their weetbook, host cells and transgenic plants that are resistant to disease are also provided. The fusion protein is target-specific, and resists degradation in the insect gut. (Updated on 23-OCT-2003 to standardise os
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          488

          An epidermal and gut chitinase (AAW01824) of Manduca sexta is encoded by cDNA clone 201 (AAT62557), isolated from a day-6 fifth instar whole larva cDNA library. The cDNA can be inserted into a vector for host expression of the chitinase protein, and may be utilised to control a population of insect pests. A recombinant baculovirus vector is provided for this purpose, as well as a transgenic tobacco plant that shows increased resistance to tobacco hornworm. Recombinant chitinase may also be expressed in host cells or larvae for subsequent purification and use as a biocide. The insect chitinase is expected to be more potent as an insect control agent than chitinases from other sources
                                                                                                                                                                                                                                                                                                                                   128

J. FUNCTION: Degrades chitin and chitotriose. May participate in the
defense against nematodes and other pathogens. Isoform 3 has no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DOLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an inactive protein. About 6% of the population are deficient for CHIT1 activity, while 35% are carriers and show reduced enzyme levels. People with CHIT1 deficiency appear perfectly healthy. MISCELLANEOUS: Patients with type I Gaucher disease (GD 1) [MIM:230800] have very high plasma levels of CHIT1, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHIT1 activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -i- SUBCELLULAR LOCATION: Secreted. "YNL, a putative mouse chitinase.";

Submitted (MAY-199) to the EMBL/GenBank/DDBJ databases.

Submitted (MAY-199) to the EMBL/GenBank/DDBJ databases.

In the defense against nematodes and chier pathogens.

In CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of Nacetyl-D-glucosamine polymers of chitin.

In SUBCELDIAR LOCATION: Secreted (Probable).

In SUBSECIPTITY: Highly expressed in submaxillary gland, and stomach. Expressed at lower levels in lung.

In SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Carbohydrate metabolism; Chītin degradation;

-: TISSUE SPECIFICITY: Highly expressed in stomach. Detected at lower levels in lung.
-: SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
-: SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EMBL; AB025008; BAA86980.1; -- EMBL; AB025008; BAA86981.1; -- EMBL; AF025009; BAA86981.1; -- EMBL; BC047336; AAH47336.1; ALT_INIT. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Degrades chitin and chitotriose. May participate in the defense against nematodes and other pathogens.

-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-acetyl-D-glucosamine polymers of chitin.

-!- SUBCELLULAR LOCATION: Secreted (Probable). Isoform 2 and isoform lack the signal sequence and are cytoplasmic.

-!- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GO; GO:0005737; C:cytoplasm; NAS.

Elol. Reprod. 53:285-294(1995).

In the fertilization process and/or early embryonic development.

In the fertilization process and/or early embryonic development.

In the fertilization process and/or early embryonic development.

In the fertilization process and/or early embryonic development.

In SUMILAR LOCATION: Secretory granules.

In SIMILAR INCATION: Epithelial cells of the oviduct.

In SIMILARITY: Belongs to family 18 of glycosyl hydrolases.

                        glycoprotein.",
Biol. Reprod. 50:927-934(1994).
-!- FUNCTION: Binds to cocyte zona pellucida in vivo. May play a role
in the fertilization process and/or early embryonic development.
-!- SUBCELDUAR LOCATION: Secretory granules.
-!- TISSUB SPECIFICITY: Oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                      246 WRNLGAPADKLIMGPPAYGRTFHLLRESKNGLQAASMGPASPGKYTKQAGFLAYYEVCSF

Malette Cartilization of hamster oviductin as a sulphated
market fartilization process and/or early embryonic development.
Might act as a protective secretion influencing the first steps of the reproductive process necessary for the normal triggering of the reproductive process necessary for the normal triggering of fertilization and early embryonic development.

C.:- SUBCLINIAR LOCATION: Secretory granules.

C.:- PITM: MIGHIN O-GLYCOSYLATED AND ALSO N-GLYCOSYLATED.

SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          73 WEKRGYERFINNLRLKNPELTTMISLGGWYEGSEKYSDWAANPTYRQOFIQSVLDFLOEYK 132
